Accuracy

🎯 **Goal:** determine weather the model can understand if the target objects are in contact or not

Properties:

- # samples per model: 5 correct & 5 incorrect proposals per template (500 total)
- No few-shot examples
- Only the 4 best performing VLMs proceed in the evaluation

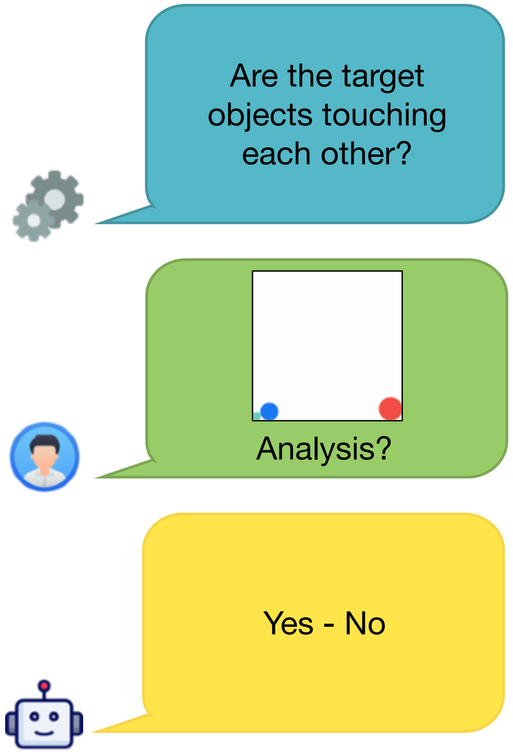

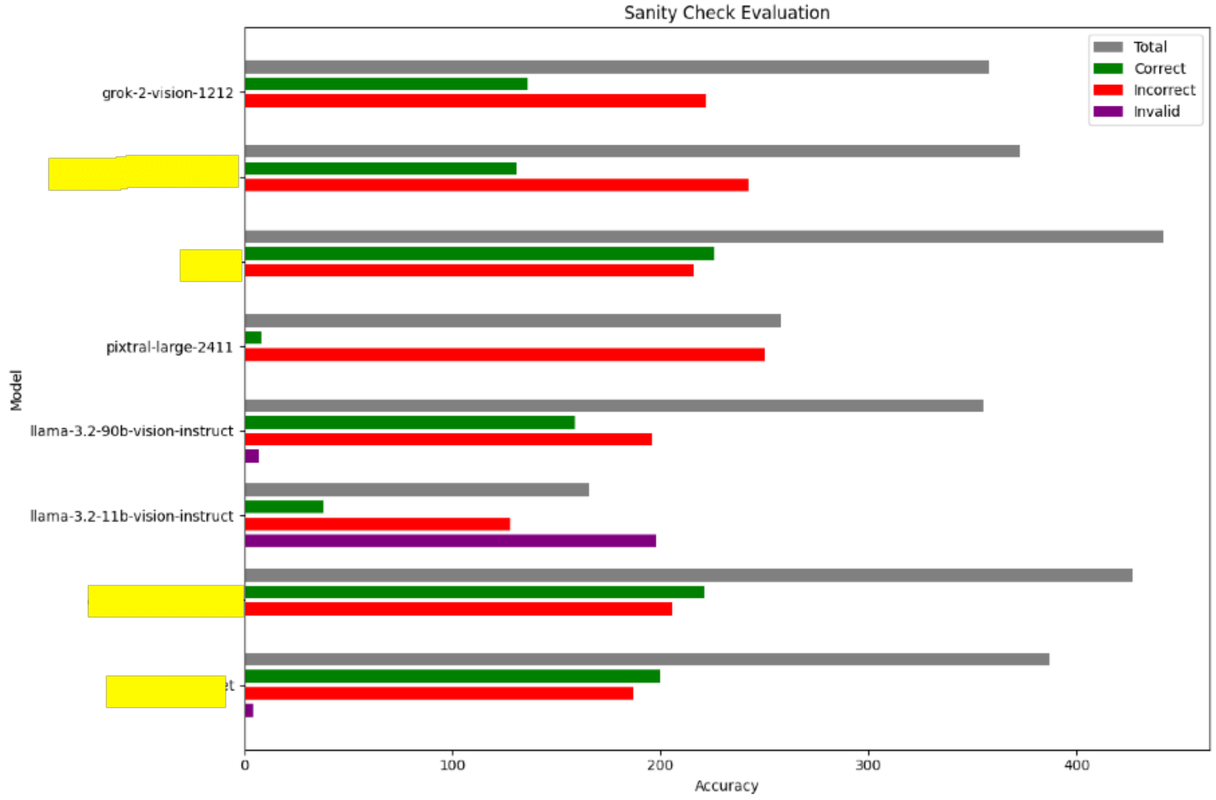

Sanity Check Evaluation

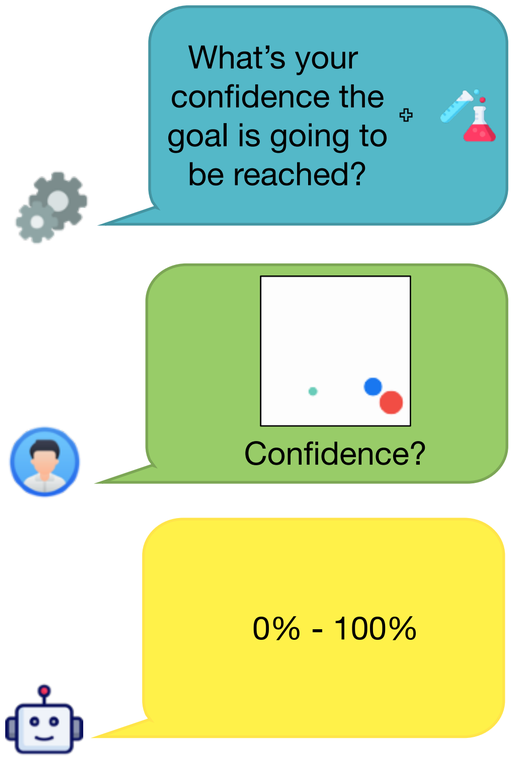

⚙️ **Properties:**

- # samples per model: 5 correct & 5 incorrect proposals per template (500 total)
- No few-shot examples
- Only the 4 best performing VLMs proceed in the evaluation

🎯 **Goal:** determine weather the model can understand if the target objects are in contact or not

Confidence Estimation

⚙️ **Properties:**

- # samples per model: 3 sample per proposal type per template (600 total)
- No few-shot examples

🎯 **Goal:** attest the likelihood that a given proposal will succeed in the goal accomplishment
